

## How can Prios Foundation speed up your projects?

**More project.  
Less management.**

# Prios Foundation

The innovative project management solution for small and medium enterprises

INNEO Prios Foundation puts you in control. Supported by Microsoft SharePoint capabilities, your work is role- and task-oriented in its approach. Combined with managed processes, you take command of projects, no matter how complex and are able to organise them intuitively. With this simple and results-oriented business tool, you have time again to concentrate on the essentials.

**YOUR PARTNER FOR PROJECT MANAGEMENT**

**Functions**

**Project creation**

Enter just a few items of information relevant to the project and you'll be presented with a project website with Gantt chart planning templates. Define the project type (large, small, software development, internal, etc.) and your project will be assigned predefined planning templates and document libraries.

**Project planning**

The creation of project plans is supported by standardised templates. In Prios Foundation, you define and change, for example, the start, duration, dependencies, milestones or their relevant links.

**Reporting**

A summary page is available for project managers. Traffic lights show the status of various key performance indicators (KPIs) at a glance.

**Resource management**

Assign resources to a project or an actual task. Each employee automatically receives an e-mail and/or an entry is added to personal task lists.

**E-mail integration**

Using INNEO Outlook TOOLS (optional add-on module), you can archive e-mails, contacts or attachments for particular projects easily and quickly and make them accessible to colleagues.

**Project documentation**

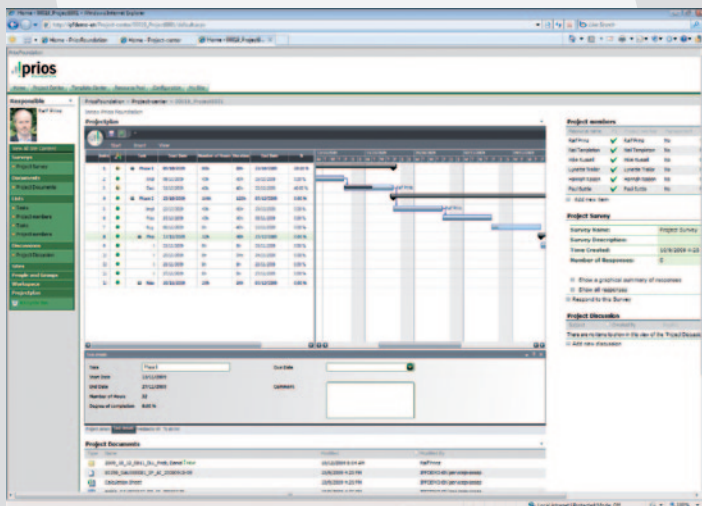

Each project website can be assigned as many document libraries as you wish. They may be structured differently depending on the project type, and may already contain different documents or document templates. Histories, versions and review and approval workflows can also be viewed.

With over 25 years' experience in product development processes, we are able to help you define the organisation of your projects, the processes to be supported and the implementation of the business tools you need.

INNEO offers a comprehensive, carefully matched portfolio: independent advice, general training in project management, user-oriented solutions based on Microsoft Sharepoint or Microsoft Project Server and much more.

**TECHNICAL REQUIREMENTS**

INNEO Prios Foundation requires Microsoft Windows SharePoint Services 3.0 or Office SharePoint Server 2007.

**Microsoft**  
**GOLD CERTIFIED**
