

CMC ViewR

Out-of-the-Box Virtual Reality

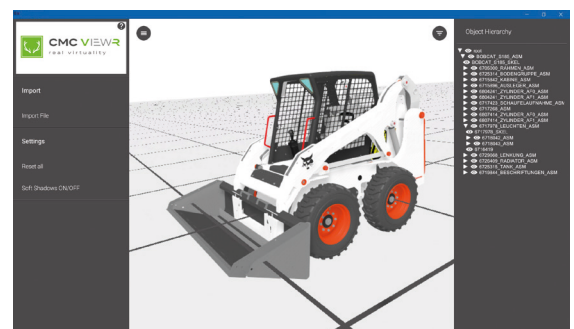

Create virtual prototypes from your designs fast and easy with CMC ViewR: You only have to load your models and assemblies, put on your VR headset and dive right in. The application strictly focuses on accessibility and usability. Designers and engineers can use it fast without additional training. CMC ViewR is the ideal extension for existing design processes in small and mid-size companies.

Virtual reality can be used in design, marketing and sales to:

- evaluate and validate concepts
- check usability and serviceability
- present projects virtually
- fine tune individual configurations
- replace expensive hardware
- maximize product maturity
- reduce mistakes and costs

INNEO ViewR was developed together with mechanical engineers and can be extended by plug-ins and be individualized up to 100%. It is compatible with STEP-files & HTC Vive/Oculus Rift.
