CADENAS SECURITY ADVISORY

CADENAS – PART SOLUTIONS AFFECTED BY LOG4J VULNERABILITY

DESCRIPTION / RESOLUTION

- V9 and V10 have a log4j.jar file located in libs/all/java/jar. This is only used in the Vault (Autodesk) interface. Therefore you can just delete the JAR at your customers if you are not using Vault. If you are using Vault, please contact Cadenas. There are possibilities to deactivate the vulnerable part of log4j with an environment variable.
- V11 has no log4j included, no action required.
- V12 has a log4j included, but it is not active currently. We will update it for SP1 (as soon as there is a fix).
